PROFESSIONAL SUMMARY

Full Stack Developer with 2+ years of experience engineering scalable, microservices-based applications across enterprise environments. Proficient in building end-to-end solutions using **Java, Spring Boot, and Angular**, designing secure RESTful APIs, and integrating distributed systems with **Apache Kafka**. Proven ability to deliver high-performance, production-grade features independently within **Agile/Scrum** teams, with a strong focus on clean architecture, CI/CD automation, and continuous code quality improvement.

TECHNICAL SKILLS

Languages: Java, SQL, HTML, TypeScript, JavaScript (React.js)

Frameworks: Spring Boot, Spring JPA, Angular, Node.js, JWT

Databases: MongoDB, MySQL

Technologies: RESTful APIs, Microservices, Apache Kafka, Eureka Server, Docker, Jenkins, SonarQube, JDBC, Git, SDLC

EXPERIENCE

LTIMindtree Ltd

Pune, India

Software Engineer — Full Stack

Apr 2024 – Present

- Engineered **10+ secure RESTful APIs** using Java & Spring Boot with JWT-based authentication, enabling protected access to sensitive financial data across HSBC's CRM workflows — reducing average API response time by **30%** through query optimization and caching.
- Built and delivered **end-to-end features** across the full stack (Java, Spring Boot, Angular, SQL) for an enterprise-scale banking CRM used in **secure financial operations and regulatory compliance workflows**.
- Architected a **microservices-based backend** using Spring Boot and **Apache Kafka** for reliable asynchronous event streaming, enabling decoupled service communication, horizontal scalability and **fault tolerance** across distributed systems.
- Automated **CI/CD pipelines using Jenkins**, increasing deployment frequency and reducing manual release effort; applied **SonarQube** static code analysis to enforce quality gates and measurably reduce technical debt across releases.
- Collaborated across cross-functional **Agile (Scrum)** teams — QA, DevOps, and Business Analysts — independently owning feature development, bug triage, and production issue resolution.
- Integrated **AI-powered development tools** into the SDLC to accelerate API design, optimize backend business logic, and improve frontend component quality — enabling faster delivery of scalable, user-centric features.

PROJECTS

V&F Basket — E-Commerce Application

github.com/deepak0103gupta/V-F-Basket

Java 17, Spring Boot, Spring Security, JWT, Spring Data JPA, MySQL, Angular 21, Angular Material

- Built a stateless **REST backend** (Spring Boot, Spring Data JPA, MySQL) with **40+ endpoints** for users, products, categories, cart, orders, payments, reviews and addresses, secured with **JWT** and Spring Security.
- Implemented the **cart-to-order workflow** with stock validation and reservation, order and payment status lifecycles, and a payment **webhook** handler for success and failure callbacks.
- Developed an **Angular 21** frontend with Angular Material for category-based browsing, login and registration, product add/edit with image upload, and profile and address management, with a JWT **HTTP interceptor**.

EventHub — Real-Time Ticket Booking System

In Progress

Java 17, Spring Boot, Spring Security, JWT, MySQL, Apache Kafka, Redis (Redisson), OpenFeign

- Building a BookMyShow-style ticketing platform as **five Spring Boot microservices** — API Gateway, Auth, Event, Booking and Notification. Four are built and tested; the API Gateway is next.
- Built the **Auth Service**, issuing **JWTs** with user ID and role claims, and the **Event Service** that Booking queries through **OpenFeign**.
- Built the **Booking Service** with **Redisson distributed locks** and Redis TTL seat holds to prevent double-booking, publishing **BOOKING_CONFIRMED** and **BOOKING_EXPIRED** events to **Kafka** for the Notification Service to consume.

EDUCATION

Terna Engineering College

Bachelor of Engineering — CGPA: 7.95

Navi Mumbai, India

Aug 2019 – Jul 2023
